Purpose of this guide

This guide supports you in confidently using the Identify Record Issues tool during routine casework to:

- Check member records
- Identify data issues (corruptions)
- Take corrective action
- Leave records in a clean state

Quick start (Start here if you're new)

If you're using the tool for the first time, follow this journey:

1. [Search](#) for a member using their unique member number
2. Check the [notification banner](#) for issues
3. Open datasets with [flagged issues](#)
4. Read the [corruption message](#)
5. Use [Compare](#) datasets if needed
6. Identify the corrupted data
7. Fix the issue in Compendia
8. [Refresh](#) the data in the tool

For more information consult the [video training guide](#)

What the tool does

- Detects data corruption (broken or inconsistent data)
- Flags integrity issues between datasets
- Highlights where to investigate

What the tool does NOT do

- It does not fix data
- It does not guarantee a record is correct
- It does not detect all corruption types - refer to the [Pensions overview](#) tab

How the tool works

The tool checks a member's record by comparing data across multiple datasets. Think of it like this:

Before you start your task you can check to see if the members record is good or if it has any corruptions that would slow you down before you begin your task.

A lot of corruptions can remain hidden in the data so the tool is designed to highlight them easily and early for you to action.

Using the tool

This guide is designed to:

- Show you what to do
- Help you understand why you're doing it
- Teach you how to get the most out of the tool

Step 1: Access and sign in

- Access the tool via the link on Pensions Hub
- Use Single Sign-On (SSO) to log in
- No additional credentials required
- Reach out to your Team Manager if you face any sign in issues

Step 2: Find a member

How to search

- Enter a unique member number into the [search field](#)
- Select Continue

Key points:

- You can search for one member at a time
- You do not need to re-enter the member ID elsewhere

Step 3: Member details page overview

This is the [primary screen](#) that displays the members details.

Here you can:

- Review member data
- Identify issues
- Navigate data sets

Step 4: Review the notification banner

- Displays total number of issues
- Lets you know if the record is clean or not
- For more information click [here](#)

Step 5: Check the data

- The data is set out in data sets similar to Compendia
- Check these as normal for data issues
- Datasets are marked with issue counts
- Focus on datasets with flagged issues
- Refer to the '[Identify record issues - the basics](#)' for how to check data on the tool

Key points:

- The data is live and mirrors the data you will see in Compendia
- The layout of the Identify record issues tool is designed to make looking through the data sets, faster, easier and less stressful

Step 6: Locate the issue

- [Rows](#) with issues are highlighted
- Use [pagination](#) if needed (issues may not be on page 1)

Step 7: Fix in Compendia

- Make corrections in the source system
- [Refresh](#) datasets to conform resolution

Identify record issues - the basics

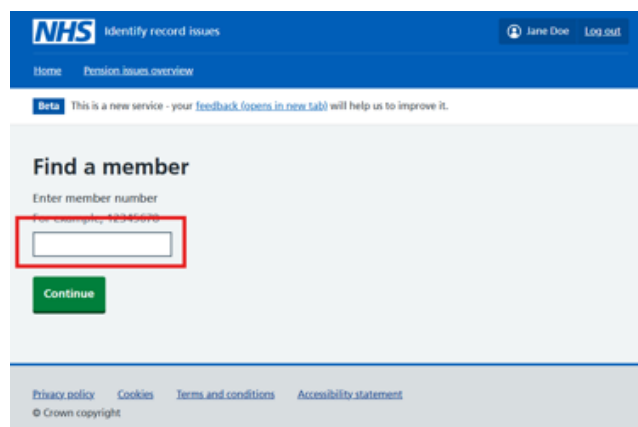

Search for a member

How to search

- Enter a unique member number into the search field
- Select Continue

Key points:

- You can search for one member at a time
- You do not need to re-enter the member ID elsewhere

Search for a member's record

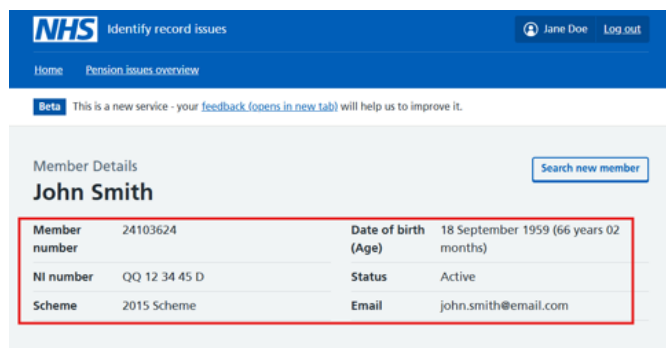

For more information consult the video walkthrough [here \(0:59\)](#)

Member summary (Basic data)

Displays key identifying information:

- Member number
- Name
- Date of birth
- NI number
- Scheme
- Status

Member number	24103624	Date of birth (Age)	18 September 1959 (66 years 02 months)
NI number	QQ 12 34 45 D	Status	Active
Scheme	2015 Scheme	Email	john.smith@email.com

Basic member information

Why it matters:

Confirms you are working on the correct record before making changes.

For more information consult the video walkthrough [here](#)

Validation notification banner

What this tells you:

- Whether issues exist on the record
- The number of issues

Member Details

John Smith [Search new member](#)

Member number	24103624	Date of birth (Age)	18 September 1959 (66 years 02 months)
NI number	QQ 12 34 45 D	Status	Active
Scheme	2015 Scheme	Email	john.smith@email.com

2 validation issues have been found for member 12345678

Core member data sets [Update data sets](#)

These data sets show core member details from Compendia. They are live and update each time you refresh the page.

You can cross-reference them in one view.

Any issues are highlighted and must be fixed before the case can be processed.

Record corruption notification banner

For more information consult the video walkthrough [here](#)

Core data sets

These represent the data domains used in validation:

- Service history [SH]
- Service groups [SG]
- Employment [ES]
- Conts & TPP [CTPP]
- Hours history details [HH]
- Linked employments [LE]

How to use

- Select a data set to expand
- You can expand multiple data sets at a time
- Review rows and highlighted issues within the sets

- [+ Service history \[SH\]](#)
- [+ Service groups \[SG\]](#)
- [+ Employment \[ES\]](#)
- [+ Conts & TPP \[CTPP\]](#)
- [+ Hours history details \[HH\]](#)
- [+ Linked employments \[LE\]](#)

Data sets on Identify record issues tool

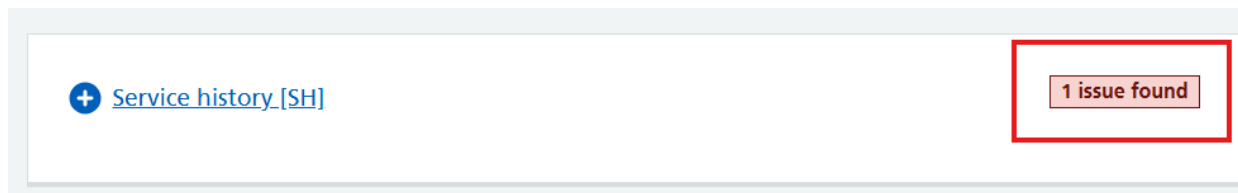

For more information consult the video walkthrough [here](#)

Identifying where issues exist

Each dataset shows:

- Issue count (e.g. "1 issue found")
- Visual emphasis on affected sets

Data set showing 1 corruption has been found

Key points

- Identifies if, where, and how many issues exist within a set
- If a set does not have a issue status - it's likely the data is not corrupt

Row-level highlighting

When a data set is open and where a corruption is present - the tool will highlight the affected row to help identify where the data is corrupted.

- Specific rows are visually highlighted
- These correspond directly to validation failures

This helps you:

- Pinpoint the exact record causing the issue
- Spend less time searching for the problem

A screenshot of a data table interface. At the top, there is a header bar with 'Service history [SH]' and a red box indicating '1 issue found'. Below the header, there is a red-bordered box containing the text 'Issue found' and a description: 'There is 1 issue in the service history table. They must be fixed before the record can be processed.' Below this, there is a red text line: 'Employment ID 1 - end date mismatch. Check [CTPP & SH]'. Below the text, there are three buttons: 'Hide correct rows', 'Compare dataset', and 'Customise data set'. Below the buttons is a table with the following columns: Employment ID, Personnel Reference, Scheme code, Start date, End date, Updated, Member status, End reason code, and Group. The table contains six rows. The first row (ID 6) is highlighted in red. The second row (ID 5) is highlighted in red. The third row (ID 3) is highlighted in red. The fourth row (ID 2) is highlighted in red. The fifth row (ID 1) is highlighted in red. The sixth row (ID 1) is highlighted in red. The table is paginated with 4 pages shown.

Employment ID	Personnel Reference	Scheme code	Start date	End date	Updated	Member status	End reason code	Group
6	21825586	2008 Section	01/04/2015	31/03/2022	31/03/2022	Active	15	1
5	21825586-4	2015 Scheme	01/04/2022	29/05/2024	29/05/2024	Active	01	2
3	21825586-4	2008 Section	02/04/2018	31/03/2022	31/03/2022	Active	15	1
2	21825586	2015 Scheme	01/04/2022	-	31/03/2025	Active	05	2
1	21825586	2008 Section	21/12/2009	31/03/2022	31/03/2022	Active	15	1
1	21825586	2008 Section	21/12/2009	31/03/2022	31/03/2022	Active	15	1

Highlighted row indicating where the corruption is present in the data set

Understanding corruption messages

Corruption types

- Mismatch - Comparison across data sets failed
 - Two (or more) related data sets contain values that do not agree with each other, when they should
 - How to resolve:
 - Use [Compare data sets](#)
 - Align by checking the relevant data sets e.g. [SH & LE]
 - Identify which dataset is incorrect
- Duplicate - The same record exists more than once when it should be unique
 - There are multiple entries representing the same thing, which can cause calculation or processing errors
 - How to resolve:
 - Identify duplicate rows (same key fields)
 - Confirm which record is valid
 - Remove or correct the duplicate in Compendia
- Missing - Required data is absent
 - A record or value that must exist is not present
 - How to resolve:
 - Use the message to identify what's missing
 - Navigate to the referenced dataset
 - Create or restore the missing data
- Overlapping - Two records cover the same period when they should not
 - Date ranges or periods conflict with each other, causing ambiguity
 - How to resolve:
 - Compare date ranges within the dataset
 - Identify where overlap occurs
 - Adjust dates so periods are continuous, not conflicting
- Invalid - Data breaks a rule or contains an incorrect value
 - The data exists, but it is not acceptable according to business rules
 - How to resolve:
 - Check the message and highlighted data
 - Verify correct value from source system (Support team necessary)
 - Update the data to a valid state

Reading corruption messages

Each message tells you:

- What is wrong
- Which datasets are involved
- Where to look

Message model

[Issue] – **[Where to look]**

Breakdown

[ID code] - **[Type]** + **[Object]**. **Check [dataset/s]**

[Employment ID 12] + [Missing] + [start date] - Check [dataset/s]

Corruption message structure

Example:

"Mismatch scheme code. Check [SH & SG]"

This means:

- Compare Service History and Service Groups
- Identify where scheme codes differ
- Determine which is correct

Key notes:

- While the majority of messages follow this formula. Due to the complexity and verity of corruptions some messages may look different.#

 For more information consult the video training [here](#).

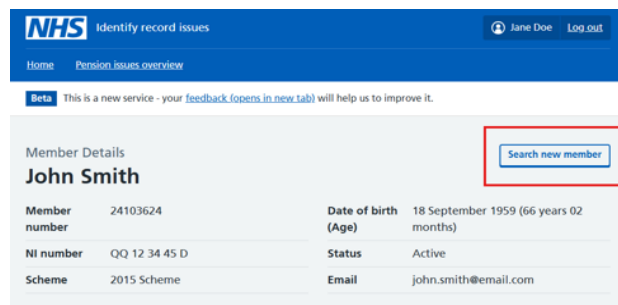

Key features of the tool

How to get the most out of the tool!

Search for a new record

- Located at top right of page
- Returns you to search screen

Use when: switching cases

Search for a new member button

 For more information consult the video training [here](#)

Update / refresh data sets

- Refresh button reloads live data from Compendia

Important:

- Data is live but not auto-refreshed
- You must refresh after making changes in Compendia

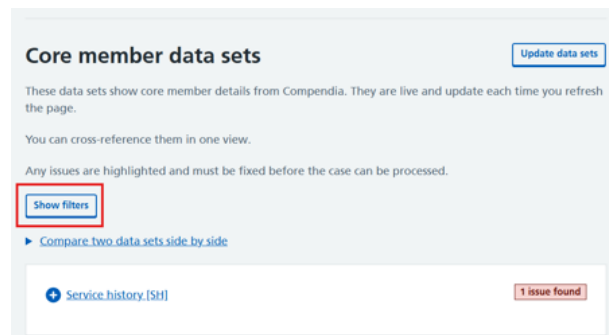

Update data so it is live and matches compendia

 For more information consult the video training [here](#).

Filter data sets

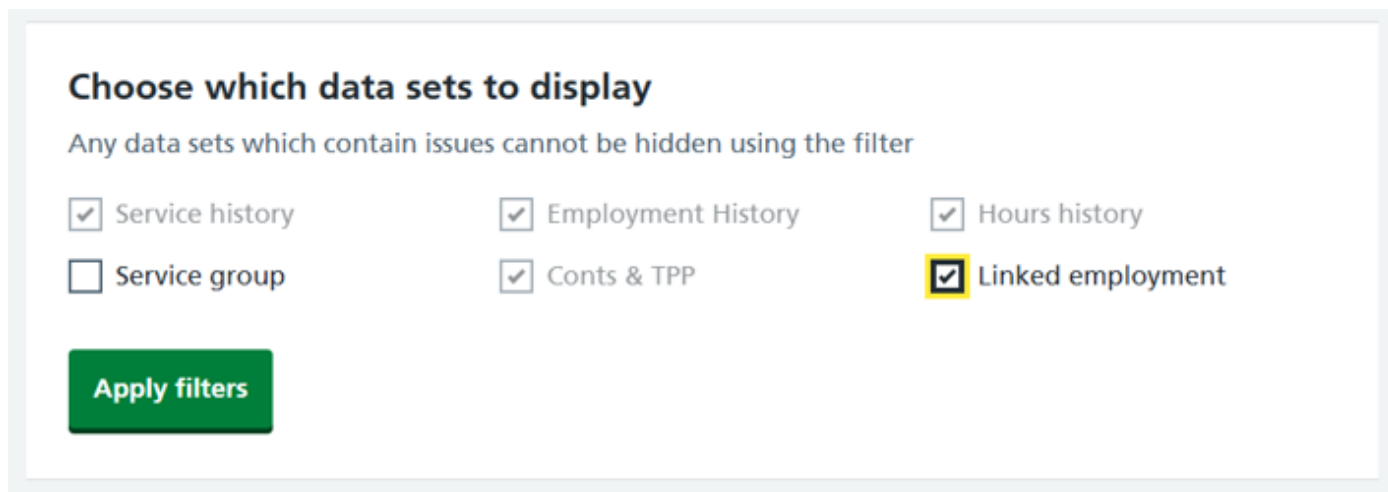

- Allows filtering of datasets
- Step 1: Click 'Show filters'
- Step 2: Click on the checkbox to turn on/off filters
 - If a check box does not have a tick it'll be removed.
 - If a check does have a tick it'll remain
 - If a text box is greyed out it'll remain
- Step 3: Click 'Apply filters'
- Step 4: Visible data sets will change

Filter button – used to filter visible data sets

Key points:

- Just because a data set is not flagged as having a corruption it does not always mean the data there is correct as some corruptions impact multiple data sets.
- Where a set is greyed out (e.g. Service history in the example below) you cannot interact with this set and it must remain visible. A set will be greyed out because the tool will have [flagged](#) a data issue in it which requires your attention.

Example of how to filter data sets

Changed your mind:

If you have clicked 'Show filters' by mistake and do not want to hide any data sets. Click 'Hide filters' to close the filter options.

Use when:

- You want to reduce the amount of data on your screen
- Focusing on specific records

 For more information consult the video walkthrough [here](#).

Hide correct rows

- Displays only rows with issues
- Removes all rows where data is deemed safe

Use when:

- Quickly isolating corruption
- Reducing noise in large records

Service history (SH) 1 issue found

Issue found

There is 1 issue in the service history table. They must be fixed before the record can be processed.

Employment ID 1 - end date mismatch. Check [CTPP & SH]

Show all rows Compare dataset Customise data set

Employment ID	Personnel Reference	Scheme code	Start date	End date	Updated	Member status	End reason code	Group
1	21823586	2008 Section	21/12/2009	31/03/2022	31/03/2022	Active	15	1

After hiding correct rows - click show all rows to return the hidden data

Service history (SH) 1 issue found

Issue found

There is 1 issue in the service history table. They must be fixed before the record can be processed.

Employment ID 1 - end date mismatch. Check [CTPP & SH]

Hide correct rows Compare dataset Customise data set

Employment ID	Personnel Reference	Scheme code	Start date	End date	Updated	Member status	End reason code	Group
5	21823586	2008 Section	01/04/2015	31/03/2022	31/03/2022	Active	15	1
5	21823586.4	2015 Scheme	01/04/2022	29/03/2024	29/03/2024	Active	01	2
3	21823586.4	2008 Section	02/04/2018	31/03/2022	31/03/2022	Active	15	1
2	21823586	2015 Scheme	01/04/2022	-	31/03/2025	Active	01	2
1	21823586	2008 Section	21/12/2009	31/03/2022	31/03/2022	Active	15	1

Before hiding correct rows - click hide correct rows to hide correct data

 For more information consult the video training [here](#).

Customise dataset view

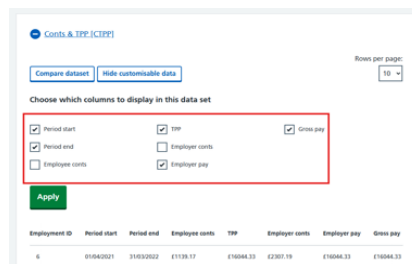

- Select which fields/columns to display with a data set
- Some sets on Compendia have a lot of data - choose which data you want to see and what data you want to hide

Use when:

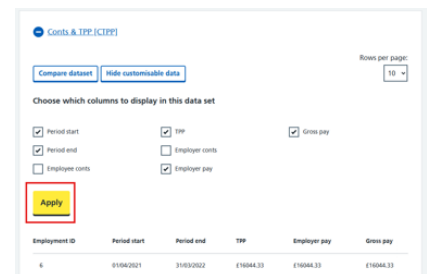

- Focusing on relevant attributes
- Simplifying analysis / investigation

1. Click 'Customise data set' to bring up the filtering options

2. Untick the data sets you wish to hide. If a data set is ticked it'll remain visible.

3. Once you are happy with your selection. Click 'Apply' to remove or show the data

 For more information consult the video walkthrough [here](#).

Pagination

- Large datasets are split across multiple pages

How to use:

- Navigate using page controls at the bottom of datasets
- You can also choose how much data you want to see on each page by using the option in the top right of the data set
 - You can select 5, 10 or All of the rows for that set.

Pagination options for a data set with many rows

Use when:

- Reviewing high-volume records
- Ensuring no issues are missed beyond the first page

Important:

Issues may exist on any page, not just the first. Make sure to check every page/ row.

For more information consult the video walkthrough [here](#).

Compare data sets (critical feature)

This allows you to view two datasets side by side to trace mismatches

Use when:

- Investigating mismatches
- A [message](#) refers to two data sets e.g. Check [SH & CTPP]
- Validating relationships between datasets (e.g. Service history vs Service groups)

How to use the 'Compare dataset' feature

Step 1: Click Compare data sets

- You can decide to compare data sets from two areas on the tool.
 1. At the top of the Click to open the 'Compare two data sets side by side' link
 2. When in a data set - click 'Compare dataset'

The screenshot shows the 'Core member data sets' interface. At the top, it states '2 validation issues have been found for member 12345678'. Below this, there's a section for 'Core member data sets' with a 'Update data sets' button. A message explains that these data sets are live and update each time the page is refreshed. A 'Show filters' button is also present. A link 'Compare two data sets side by side' is highlighted with a red box. Below this, the 'Service history (SH)' dataset is shown with a '1 issue found' badge. A red box highlights an 'Issue found' message: 'There is 1 issue in the service history table. They must be fixed before the record can be processed. Employment ID 1 - and data mismatch. Check [CTPP & SH]'. At the bottom, there are buttons for 'Hide correct rows', 'Compare datasets' (highlighted with a red box), and 'Customise data set'. A table with columns for Employment ID, Personal Reference, Scheme code, Start date, End date, Updated, Member status, End reason code, and Group is partially visible.

How to compare data sets

Step 2: Choose datasets

- You can only select 2 data sets
- If you chose to compare data from within a set using the button - this set will be pre-selected for you

Example:

- Left: Service history [SH]
- Right: Service groups [SG]

▼ [Compare two data sets side by side](#)

Choose which two data sets you would like to compare

☒ Service history [SH]	☐ Employment [ES]	☐ Hours history details [HH]
☐ Service groups [SG]	☒ Conts & TPP [CTPP]	☐ Linked employments [LE]

Compare

Selecting the sets you want to compare

Why it's useful: This stops the need to screenshot data and allows you to compare live data from 2 sets next to each other to support your investigation

Step 3: Check data

- Work as normal to interrogate the data and investigate the issue
- When you have finished with this view select the back button in the top left of the page

Beta This is a new service - your [feedback](#) (opens in new tab) will help us to improve it.

[< Back](#)

John Smith

Compare data sets

Comparison view [SH & CTPP]

 For more information consult the video walkthrough [here](#).

Back to top

- Returns user to top of page
- This moves around with you and remains on your screen

Use when:

- Navigating large records efficiently

Back to the top button

Common questions (FAQs)

“I can’t find the issue”

Use:

- Highlighted rows (this shows exactly where the issue exists)
 - Check the issue message (this will sometimes direct you to other data sets that are linked to the problem)
 - Use [pagination](#) if needed (issues may not be on page 1)
-

“There’s too much data - my screen is so busy”

Use:

- [Hide correct rows](#) (removes correct data and lets you focus on the problem)
 - Filter [data sets](#) and [columns](#) (Reduces noise and surfaces problem data)
-

“The data doesn’t match”

Use:

[Compare data sets](#) (See two sets side by side for easy comparison)

“The record is very large”

Use:

- [Pagination](#) (Allows you to chop and change how much data you see)
 - Always check all pages to make sure there are no hidden corruptions
-

“This record doesn’t make sense”

Do:

- Re-read the corruption message
- Re-check the related datasets
- Confirm whether the issue type is supported (via the [overview page](#))

If still unclear:

- Refer to your SME
 - Raise a ticket where needed
-

“I’ve made changes in Compendia”

Use:

Update data (After making changes in Compendia make sure to click ‘[Update data sets](#)’ to ensure you are viewing the latest information.)

“I want to start again”

Use:

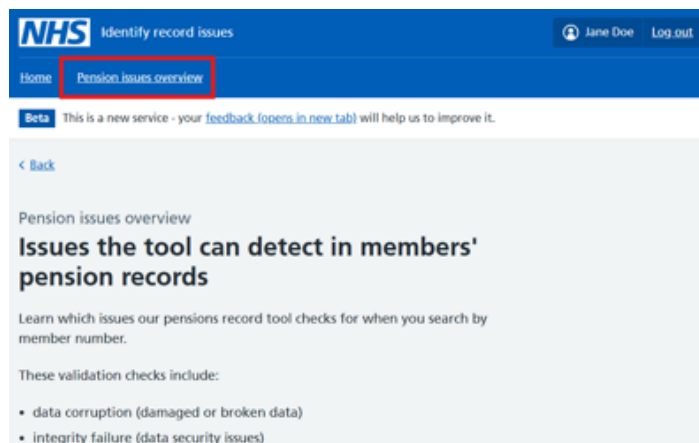

[Search for a new record](#) (Allows you to enter another unique member ID)

Pensions issues overview

The 'Pensions overview page' sits at the top in the header alongside the 'Home' option.

The goal of this page is to help you:

- Understand what checks exist
- Confirm whether your issue type is supported
- Understand limitations of the tool (what it cannot do yet)

The tool currently validates corruptions across these data sets:

- Service history
- Service groups
- Employment
- Conts & TPP
- Hours history
- Linked employment

These map directly to what you'll see on the member details page

Most importantly it details what the tool can do and what it can't do.

If your issue is not supported by the tool:

- Do not rely on the tool
- Investigate manually

You are responsible for:

- Investigating
- Interpreting
- Fixing

 For more information consult the video training [here](#)

Final checks and guidance

Before moving on from a record, take a moment to confirm:

- You have reviewed all flagged datasets
- You have checked all pages (not just the first)
- You have used Compare datasets where mismatches were present
- You have refreshed the data after making changes

What “good” looks like

A record is in a good state when:

- No issues are shown in the notification banner
- The data is consistent across related datasets
- No obvious gaps or anomalies remain after review

Important reminder

“0 issues” in the [validation notification banner](#) does not guarantee the record is correct.

The tool helps you identify known corruption types, but:

- Some issues are not yet detectable
- Some inconsistencies require manual judgement

Additional support

To see the Identify record issues tool in action:

- Refer to the [video tutorials](#) linked in this guide
- Use them alongside this guide to reinforce your understanding

This tool is here to help you identify a corruption by supporting your investigation - not replacing it.

- It helps you:
 - Navigate complex data
 - Identify where problems exist
 - Understand relationships between datasets

- But you must:
 - Apply judgement where data looks suspicious and known gaps exist ([listed here](#))
 - Use Compendia to fix
 - Understand its limitations (via the overview page)
 - Ensure the record is accurate

By combining the tool with your knowledge and these practices, you can confidently identify and resolve data issues.
